

Thank you for purchasing our Vortex Exo Cage!

YFZ450R Vortex Exo Cage Mounting Instructions

Step 1. Remove Grommet and Collar from OEM ECU Mount. These will be installed in the Exo Cage Mounting Bracket.

Step 2. Take Vortex out of the Vortex rubber sleeve and discard.

Step 3. Install 8 Supplied Grommets into Exo Cage Back Plate. Use WD-40 to help slide grommets into place.

Step 4. Re-Using the Collar and Grommet assembly from Stock ECU Mount, install these into the Exo Cage Mounting Bracket.

Step 5. Install Vortex into Back Plate.

Step 6. Using the supplied Socket Head Cap Screws, washers and nylock nuts, secure Vortex using the Exo Cage Face Plate locking it into the slot.

Step 7. Orientate Vortex and find best fitment for your wire harness. The Exo Cage can be rotated 90, 180, 270, 360 Degrees.

Step 8. Bolt on Exo Cage to OEM battery box or DBR battery box and Shread!

Note** You May need to un-tape portions of your wire harness to find best fitment. Or use an aftermarket harness from a reputable harness builder such as Jimmy Bortz at Wired Out Racing or Max Gogel at Raw Connections both are available through Facebook.

The Exo Cage was designed, created and manufactured by Chris Borning in 2018 and is the Original. We have changed our name to honor our late son Dominic that passed away in 2021.
